INDEX

Actinomycetes, effect of various treatments on number of, in soils, 420–422, 424.

Alfalfa, tolerance of, to alkali, 115–124.

Alkali Salts—
The Effects of, on Bacteriological Activities in Soil: I. Ammonification (paper), William M. Gibbs, H. W. Batchelor, and H. P. Magnuson, 343–356.
The Effects of, on Bacteriological Activities in Soil: II. Nitrification (paper), William M. Gibbs, H. W. Batchelor, and H. P. Magnuson, 357–369.
The Effects of, on Bacteriological Activities in Soil: III. Ammonification, Nitrification and Crop Yield (paper), William N. Gibbs, H. W. Batchelor and H. P. Magnuson, 371–379.

Aluminum—
absorption of $CaSO_4$ by precipitated hydrated oxides of, 129–143.

Amides—
The Accelerating Effect of, on the Denitrifying Processes in the Soil (abstract), Lumia Carrado, 38.

Ammonification—
The Effects of Alkali Salts on Bacteriological Activities in Soil: I (paper), William M. Gibbs, H. W. Batchelor and H. P. Magnuson, 343–356.

Ammonifying—
Concerning the, Power of Agricultural soils (abstract), R. Perotti and F. Aureli, 84–85.

Ammonium sulfate, availability of nitrogen, in, 467–475.

Aureli, F., Perotti, R., and (abstract), Concerning the Ammonifying Power of Agricultural Soils, 84–85.

Availability—
Field Experiments on the, of Nitrogenous Fertilizers 1918–1922 (paper), J. G. Lipman, A. W. Blair and A. L. Prince, 57–79.
of Nutrients in Subsoils (paper), C. E. Millar, 275–285.
The, of Nitrogen in Nitrate of Soda, Ammonium Sulfate, and Dried Blood When the Amounts of Phosphoric Acid and Potash are varied (paper), A. W. Blair and A. L. Prince, 467–476.
The, of Subsoil Potash (paper), Sidney B. Haskell, 105–114.

Azotobacter—
The Fixation of Nitrogen by, in a Displaced Solution and in Soil Residue Therefrom (paper), C. B. Lipman and L. J. H. Teakle, 99–103.

Bacilli—
About some Root, of Calendula Officinalis L. (abstract), R. Perotti and G. Zaffato, 43.

Bacteria—
effect of gypsum sulfur, rock phosphate and limestone on number of, in soil, 420–421.
The Relation of Fungi to the Numbers of, in the Soil (paper), Walter E. Fleming, 301–307.

Bacterial Flora—
A Quantitative and Qualitative Determination of the, of some Representative Virgin and Cultivated Texas Soils (paper), O. B. Williams, 163–168.

Bahrt, G. M., Russel, J. C., Jones, E. G., and (paper), The Temperature and Moisture Factors in Nitrate Production, 381–398.

Barley, nitrogen necessary for optimum growth of, 185–191.

Batchelor, H. W., Gibbs, William M., and Magnuson, H. P. (paper), The Effects of Alkali Salts on Bacteriological Activities in Soil: I. Ammonification, 343–356.

Batchelor, H. W., Gibbs, William M., and Magnuson, H. P. (paper), The Effects of Alkali Salts on Bacteriological Activities in Soil: II. Nitrification, 357–369.

Batchelor, H. W., Gibbs, William M., and Magnuson, H. P. (paper), The Effects of Alkali Salts on Bacteriological Activi-

ties in Soil: III. Ammonification, Nitrification and Crop Yield, 371–379.
Blair, S. W., Lipman, J. G., and Prince, A. L. (paper), Field Experiments on the Availability of Nitrogenous Fertilizers 1918–1922, 57–79.
Blair, A. W., and Prince, A. L. (paper) The Availability of Nitrogen in Nitrate of Soda, Ammonium Sulfate, and Dried Blood When the Amounts of Phosphoric Acid and Potash are varied, 467–476.
Bollen, W. B. (paper), Biochemical Effects of Gypsum on Iowa Soils, 417–440.
Bouyoucos, George J. (paper), The Chief Factors Which Influence the Heat of Wetting of Soil Colloids, 477–482.
Bouyoucos, George J. (paper), The Heat of Wetting as a New Means of Estimating the Colloidal Material in Soils, 153–162.
Brugues, Casimiro (abstracts), Agrology, Colloidal Clay, 37.
Bulli, Mario, and Fernandez, Lorenzo, (abstract), A Rapid Method for the Determination of Potash in Agricultural and Industrial Materials, 81.
Burr, W. W., Russel, J. C., and (paper), Studies on the Moisture Equivalent of Soils, 251–266.
Calcium—
content of soils under irrigation, 92–95.
easily soluble, of soils as an indicator of their response to liming, 441–458.
Calcium phosphate (primary), movement of, in limed and water-treated soils, 461–462.
Carbon—
effect of irrigation and manure on, content in soil, 89–90.
Carbon-nitrogen ratio, effect of irrigation water and manure on, 90–91.
Chlorine, influence of irrigation water on the, contents of grains, 325–329.
Clay—
Colloidal (abstract), Casimiro Brugues, 37.
Clover, sweet tolerance of, to alkali, 115–124.
Colloidal Material—
The Heat of Wetting as a New Means of Estimating the, in Soils (paper), George Bouyoucos, 153–162.
Colloids—
Soil, as Simple Suspensions (paper), E. B. Powell, 407–409.
The Chief Factors Which Influence the Heat of Wetting of Soil (paper), George J. Bouyoucos, 477–482.
Corn—
nitrogen necessary for optimum growth of, 185–191.
tolerance of, to alkali, 115–124.
Corrado, Lumia (abstract), The Accelerating Effect of Amides on the Denitrifying Processes in the Soil, 38.
Crop Yield—
The Effect of Alkali Salts on Bacteriological Activities in Soil: III. Ammonification, Nitrification and (paper), William M. Gibbs, H. W. Batchelor and H. P. Magnuson, 371–379.
Cyrenaica—
Investigations of a Sample of Water from Uadi Gattarg River (abstract), A. Ferrara and G. Titta, 39.
De Capitani Da Vimercate, Serafino (abstract), The Meteoric Conditions of Soil and of Cultivation in Relation to Irrigation, 37.
De Fiestois, R. (abstract), The Origin of Sodium Nitrate, 37.
D'Ippolito, G. (abstract), Experimental Studies on the Fertilizing Effect of Sulfur, 82–83.
D'Ippolito, G. (abstract), Recent Studies and Observations Concerning the Action of Manganese upon Plant Growth, 85–86.
Dried blood, availability of nitrogen in, 467–475.
Fallowing, effect of, on various soil phenomena, 417–422.
Fernandez, Lorenzo, Bulli, Mario, and (abstract), A Rapid Method for the Determination of Potash in Agricultural and Industrial Materials, 81.
Ferrara, A., and Titta, G. (abstract), Investigations of a Sample of Water from Uadi Gattarg River, Cyrenaica, 39.
Fertilizer—
About Rehmdor's Nitrogenous (abstract), P. Roviera, 81.
availability of nitrogenous, 57–80.
Fleetwood, J. Ross (paper), Easily Soluble Calcium of Soils as an Indicator of their Response to Liming, 441–458.
Fleming, Walter E. (paper), The Relation of Fungi to the Numbers of Bacteria in the Soil, 301–307.

Fungi—
effect of various treatments on number of, in soil, 422–424.
the relation of, to the numbers of bacteria in the soil, 301–307.
Gibbs, William M., Batchelor, H. W., and Magnuson, H. P. (paper), The Effects of Alkali Salts on Bacteriological Activities in Soil: I. Ammonification, 343–356.
Gibbs, William M., Batchelor, H. W., and Magnuson, H. P. (paper), The Effects of Alkali Salts on Bacteriological Activities in Soil: II. Nitrification, 357–369.
Gibbs, William M., Batchelor, H. W., and Magnuson, H. P. (paper), The Effects of Alkali Salts on Bacteriological Activities in Soil: III. Ammonification, Nitrification and Crop Yield, 371–379.
Ginsburg, Joseph M. (paper), A Modified Respiration Apparatus for Plant and Soil Studies, 411–415.
Grandis, G., Perotti, R., and (abstract), Concerning the Determination of the Nitrifying Power of Agricultural Soils, 81.
Greaves, J. E., Hirst, C. T. and (paper), the Influence of Manure and Irrigation Water on the Carbon, Phosphorus, Calcium and Magnesium of the Soil, 87–97.
Greaves, J. E., and Nelson, D. H. (paper), The Iron, Chlorine, and Sulfur Contents of Grains and the Influence of Irrigation Water upon Them, 325–330.
Gypsum—
biochemical effects of, on soils, 417–440.
Haskell, Sidney B. (paper), The Availability of Subsoil Potash, 105–114.
Heat of wetting as a means of estimating soil colloids, 153–161.
Hirst, C. T., and Greaves, J. E. (paper), The Influence of Manure and Irrigation Water on the Carbon, Phosphorus, Calcium and Magnesium of the Soil, 87–97.
Iron—
absorption of $CaSO_4$ by precipitated hydrated oxides of, 129–143.
influence of irrigation water on the, contents of grains, 325–329.
Irrigation—
The Iron, Chlorine, and Sulfur Contents of Grains and the Influence of, Water Upon Them (paper), J. E. Greaves and D. H. Nelson, 325–330.
The Meteoric Conditions of Soil and of Cultivation in Relation to (abstract), Serafino De Capitani De Vimercate, 37–38.
Jones, Robert L., and Pember, F. R. (paper), The Fertilizer Nutrients Required by Barley, Wheat and Oats, as shown by both Soil and Water Cultures, 169–199.
Jones, E. G., Russel, J. C., and Bahrt, G. M. (paper), The Temperature and Moisture Factors in Nitrate Production, 381–398.
Lime—
effect of, on nitrification in soils, 422–424.
The Hungarian Method for the Determination of the Nature of the, in the Soil (abstract), Juan Marcilla, 39.
Limestone—
The Effect of the Different Degrees of Fineness of, Upon Decomposition of Organic Matter in the Soil (paper), C. R. Runk, 267–274.
Liming—
Easily Soluble Calcium of Soils as an Indicator of Their Response to (paper), J. Ross Fleetwood, 441–458.
the influence of, on the movement of soluble salts in soils, 459–466.
Lipman, J. G., Blair, A. W., and Prince, A. L. (paper), Field Experiments on the Availability of Nitrogenous Fertilizers 1918–1922, 57–79.
Lipman, C. B., and Teakle, L. J. H. (paper), The Fixation of Nitrogen by Azotobacter in a Displaced Solution and in Soil Residue therefrom, 99–103.
MacIntire, W. H., and Shaw, W. M. (paper), The Ternary Systems $CaO-Fe_2O_3-CaSO_4$ and $CaO-Al_2O_3-CaSO_4$ as Explaining the Retention of Sulfates by Heavily Limed Soil, 125–151.
MacIntire, W. H., Shaw, W. M., and Young, J. B. (paper), The Rôle of Silica in Counteracting Magnesia-Induced Toxicity, 331–341.
MacIntire, W. H., and Young, J. B. (paper), Nitrate Leachings as Influenced by Calcic and Magnesic Additions, With and Without Sulfur Carriers, 309–323.
Magnesium—
content of, in soils under irrigation, 95–96.

effect of silica on toxicity induced by, 332–334.
Magnuson, H. P., Gibbs, William M., Batchelor, H. W., and (paper), The Effects of Alkali Salts on Bacteriological Activities in Soil: I. Ammonification, 343–356.
Magnuson, H. P., Gibbs, William M., Batchelor, H. W., and (paper), The Effects of Alkali Salts on Bacteriological Activities in Soil: II. Nitrification, 357–369.
Magnuson, H. P., Gibbs, William M., Batchelor, H. W., and (paper), The Effects of Alkali Salts on Bacteriological Activities in Soil: III. Ammonification, Nitrification and Crop Yield, 371–379.
Magnuson, H. P., Neidig, Ray E., and (paper), Alkali Studies: II. Tolerance of Alfalfa, Corn and Sweet Clover for Alkali in Idaho Soils, 115–124.
Manganese—
Recent Studies and Observations Concerning the Action of, Upon Plant Growth (abstract), G. D'Ippolito, 85–86.
Marcilla, Juan (abstract), The Hungarian Method for the Determination of the Nature of the Lime in the Soil, 39.
Microbiology—
Soil, in 1924: An attempt at an Analysis and a Synthesis (paper), Selman A. Waksman, 201–249.
Millar, C. E. (paper), Availability of Nutrients in Subsoils, 275–285.
Moisture Equivalent—
Studies on the, of Soils (paper), J. C. Russel and W. W. Burr, 251–266.
Neidig, Ray E., and Magnuson, H. P. (paper), Alkali Studies: II. Tolerance of Alfalfa, Corn and Sweet Clover for Alkali in Idaho Soils, 115–124.
Nelson, D. H., Greaves, J. E., and (paper), The Iron, Chlorine, and Sulfur Contents of Grains and the Influence of Irrigation Water upon them, 325–330.
Nitrate—
The Temperature and Moisture Factors in, Production (paper), J. C. Russel, E. G. Jones and G. M. Bahrt, 381–398.
Nitrification—
effect of liming on, 422, 424.
effect of sulfur additions on, 427–430.
The Effects of Alkali Salts on Bacteriological Activities in Soil: II (paper), William M. Gibbs, H. W. Batchelor and H. P. Magnuson, 357–369
Nitrifying Power—
Concerning the Determination of the, of Agricultural Soils (abstract), R. Perotti and G. Grandis, 81–82.
Nitrogen—
availability of, in $NaNO_3$, $(NH_4)_2SO_4$, dried blood, 467–476.
fixation of, by azotobacter, 99–103.
necessary for optimum growth of barley, wheat, and corn, 185–191.
Nutrients—
The Fertilizer, Required by Barley, Wheat and Oats, as shown by both Soil and Water Cultures (paper), Robert L. Jones and F. R. Pember, 169–199.
Oats, nitrogen necessary for optimum growth of, 185–191.
Odén, Sven (paper), The Size Distribution of Particles in Soils and the Experimental Methods of Obtaining Them, 1–35.
Organic matter, effect of different degrees of fineness of limestone on the decomposition of, 267–274.
Paterno, Emanuele (abstract), Preparation of Potash Salts from Leucite and from other Silicates of Potash, 42.
Pember, F. R., Jones, Robert L., and (paper), The Fertilizer Nutrients Required by Barley, Wheat and Oats, as shown by both Soil and Water Cultures, 169–199.
Perotti, R., and Aureli, F. (abstract), Concerning the Ammonifying Power of Agricultural Soils, 84–85.
Perotti, R., and Grandis, G. (abstract), Concerning the Determination of the Nitrifying Power of Agricultural Soils, 81–82.
Perotti, R., and Zaffato, G. (abstract), About some Root Bacilli of Calendula Officinalis L., 43.
Phosphoric acid, effect of, on nitrogen availability, 467–476.
Phosphorus—
amount of, in various foot sections of soils under irrigation, 92.
Some Factors Influencing the Solubility of, in Soil—Acid Phosphate Mixtures (paper), C. H. Spurway, 399–405.
Plant, respiration apparatus for, and soil study, 411–415.

Potash—
A Rapid Method for the Determination of, in Agricultural and Industrial Materials (abstract), Maria Bulli and Lorenzo Fernandez, 81.
availability of, from subsoil, 105–114.
effect of, on nitrogen availability, 467–475.
Potash Salts—
Preparation of, from leucite and from other Silicates of Potash (abstract), Emanuele Paterno, 42.
Potassium chloride, effect of temperature upon the rate of movement of, in soils, 462–463.
Powell, E. B. (paper), Soil Colloids as Simple Suspensions, 407–409.
Pratolongo, U. (abstract), Concerning the Reaction of Italian Soils with Special Reference to the Soils of Lombardy, 83–84.
Prince, A. L., Blair, A. W., and (paper), The Availability of Nitrogen in Nitrate of Soda, Ammonium Sulfate, and Dried Blood When the Amounts of Phosphoric Acid and Potash are varied, 467–476.
Prince, A. L., Lipman, J. G., Blair, A. W., and (paper), Field Experiments on the Availability of Nitrogenous Fertilizers 1918–1922, 57–79.
Profile Studies—
Preliminary, of certain Forest Soils (paper), P. S. Spokes, 45–55.
Reaction—
Concerning the, of Italian Soils with Especial Reference to the Soils of Lombardy (abstract), U. Pratolongo, 83–84.
Respiration apparatus for plant and soil studies, 411–415.
Roviera, P. (abstract), About Rhemsdor's Nitrogenous Fertilizers, 81.
Runk, C. R. (paper), The Effect of the Different Degrees of Fineness of Limestone upon Decomposition of Organic Matter in the Soil, 267–274.
Russel, J. C., and Burr, W. W. (paper), Studies on the Moisture Equivalent of Soils, 251–266.
Russel, J. C., Jones, E. G., and Bahrt, G. M. (paper), The Temperature and Moisture Factors in Nitrate Production, 381–398.
Salts, movement of soluble, as influenced by liming, temperature, and compaction, 459–466.
Scurti, F. (abstract), For the Knowledge of Agricultural Soil: Natural Zeolites, 39–42.
Shaw, W. M., MacIntire, W. H., and (paper), The Ternary Systems $CaO-Fe_2O_3-CaSO_4$ and $CaO-Al_2O_3-CaSO_4$ as Explaining the Retention of Sulfates by Heavily Limed Soil, 125–151.
Shaw, W. M., MacIntire, W. H., and Young, J. B. (paper), The Rôle of Silica in Counteracting Magnesia-Induced Toxicity, 331–341.
Silica—
the relation of, to the absorption of K and to the nutrient requirement for phosphoris acid, 195–197.
the rôle of, in counteracting toxicity, 331–335.
Sodium Nitrate—
The Origin of (abstract), R. De Fiestois, 37.
Soil—
A Modified Respiration Apparatus for plant and, studies (paper), Joseph M. Ginsburg, 411–415.
and acid phosphate mixtures, factors influencing the solubility of phosphorus in, 399–405.
effect of alkali salts on ammonification in, 343–356.
effect of alkali salts on crop yield in, 371–379.
effect of alkali salts on nitrification in, 357–369.
mechanical analyses of, 1–35.
The Influence of Manure and Irrigation Water on the Carbon, Phosphorus, Calcium and Magnesium of the (paper), C. T. Hirst and J. E. Greaves, 87–97.
The Ternary Systems $CaO-Fe_2O_3-CaSO_4$ and $CaO-Al_2O_3-CaSO_4$ as Explaining the Retention of Sulfates by Heavily Limed (paper), W. H. MacIntire and W. H. Shaw, 125–151.
Soils—
Biochemical Effects of Gypsum on Iowa (paper), W. B. Bollen, 417–440.
Certain Relationships between Added Salts and the Moisture of (paper), L. C. Wheeting, 287–299.
preliminary profile studies of forest, 45–55.
The Influence of Liming, Temperature

and Compaction on the Movement of Soluble Salts in (paper), L. C. Wheeting, 459–466.
The Size Distribution of Particles in, and the Experimental Methods of Obtaining Them (paper), Sven Odén, 1–35.
Spokes, P. S. (paper), Preliminary Profile Studies of Certain Forest Soils, 45–55.
Spurway, C. H. (paper), Some Factors Influencing the Solubility of Phosphorus in Soil-Acid Phosphate Mixtures, 399–405.
Sulfates, the retention of, by heavily limed soils, 125–152.
Sulfur—
effect of, on nitrate leaching, 309–322.
effect of, on nitrification, 427–430.
Experimental Studies on the Fertilizing Effect of (abstract), G. D'Ippolito, 82–83.
influence of irrigation water on the, contents of grains, 325–329.
oxidation in soils, 422, 424.
Teakle, L. J. H., Lipman, C. B., and (paper), The Fixation of Nitrogen by Azotobacter in a Displaced Solution and in Soil Residue Therefrom, 99–103.
Temperature, the influence of, on movement of soluble salts in soils, 459–466.
Titta, G., Ferrara, A., and (abstract), Investigations of a sample of water from Uadi Gattarg River, Cyrenaica, 39.
Toxicity—
The Rôle of Silica in Counteracting Magnesia-Induced (paper), W. H. MacIntire, W. M. Shaw and J. B. Young 331–341.
Waksman, Selman A. (paper), Soil Microbiology in 1924: An Attempt at an Analysis and a Synthesis, 201–249.
Wheat, nitrogen necessary for optimum growth of, 185–191.
Wheeting, L. C. (paper), Certain Relationships between Added Salts and the Moisture of Soils, 287–299.
Wheeting, L. C. (paper), The Influence of Liming, Temperature and Compaction on the Movement of Soluble Salts in Soils, 459–466.
Williams, O. B. (paper), A Quantitative and Qualitative Determination of the Bacterial Flora of some Representative Virgin and Cultivated Texas Soils, 163–168.
Young, J. B., MacIntire, W. H., and (paper), Nitrate Leachings as Influenced by Calcic and Magnesic Additions, with and without Sulfur Carriers, 309–323.
Young, J. B., MacIntire, W. H., Shaw, W. M., and (paper), The Rôle of Silica in Counteracting Magnesia-Induced Toxicity, 331–341.
Zeolites—
For the Knowledge of Agricultural Soil: Natural, (abstract), F. Scurti, 39–42.
Zaffato, G., Perotti, R., and (abstract), About some Root Bacilli of Calendula Officinalis L., 43.
